

StyleCop Instructions

Last Updated: September 20, 2015

Step-by-Step Guide

Same thing with what happened with NUnit and unit tests, unfortunately it turns out that VS 2015 Express IDE is restricted (Thank you Microsoft!) in the sense that you can search and install necessary extensions to run unit tests within the IDE. This means you cannot just install StyleCop as an extension and then just go. You need to take some additional steps to make it work.

I found a way to modify the project that would house your solution such that, if installed StyleCop should be working. Tested this on VS 2015 Express on my box and worked.

I tried to summarize how you can make sure your assignments can pass the enforced style.

Hope this helps, and again, this is not battle tested yet, so let me or your TA know about issues if you get stuck.

****Before going through the steps before, make sure you pulled the assignment from GitHub and built the solution including the Test project.*

Download NUnit GUI Runner

1. Go to StyleCope page below and download the latest package there and run the installer with all defaults selected (i.e. do not change anything on the installer options, just run through)

2. Once the installation is completed, then go and find your *Settings.StyleCop* file
In my case it was hidden under *C:\Program Files (x86)\StyleCop 4.7*

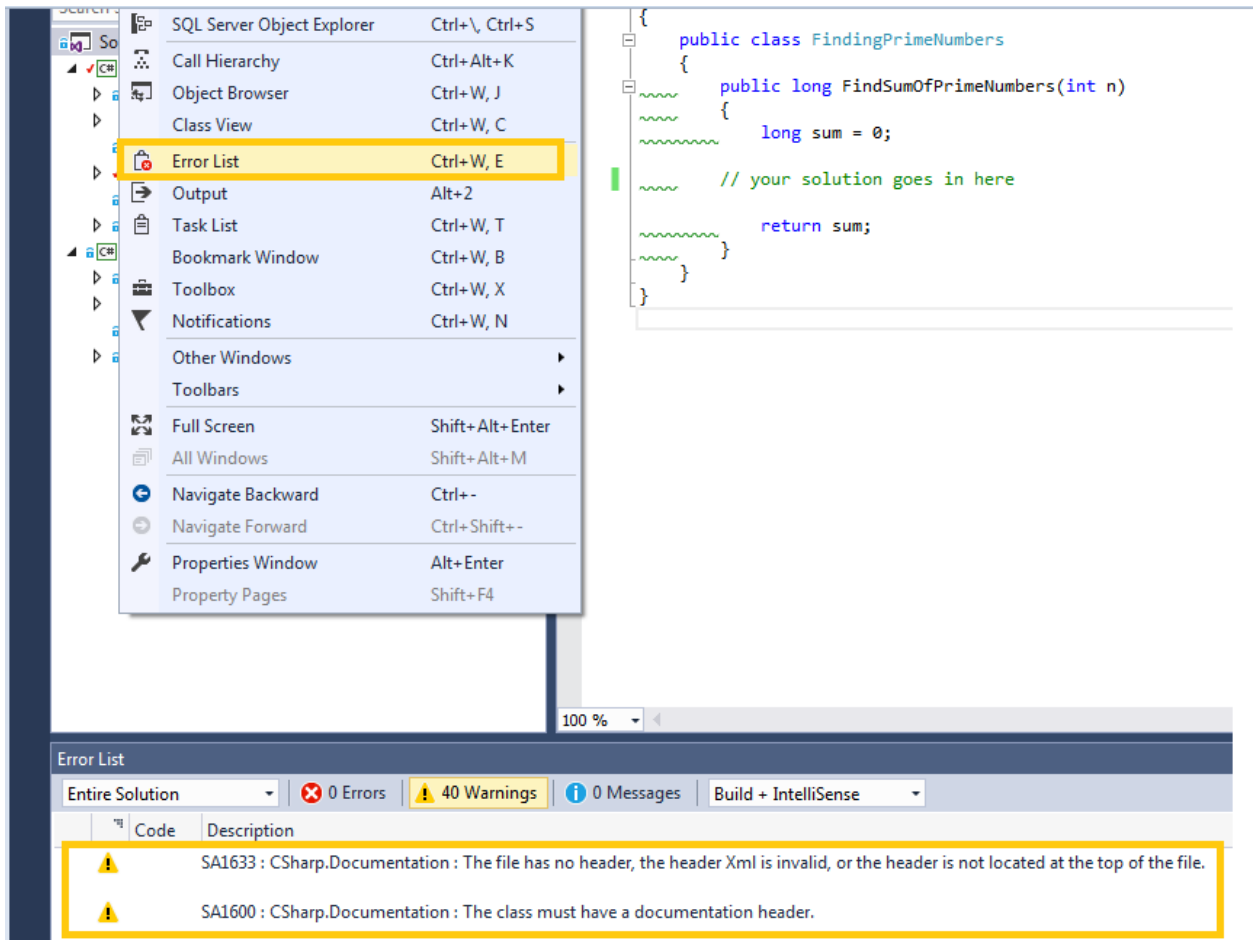

3. Next step is to disable some of the rules. Unfortunately I tried to copy over my *Settings.StyleCop* file to a clean environment, but when I re-built the file was generated from scratch hence overwriting all my rules and reverting it back to the default. I will take a look at this again, but for now please do this manually just to get over with it.

So double click on the *Settings.StyleCop* file and uncheck all the rules that is posted in the screenshot below

- Now when you build your solution, if you go to your *Error List* window, if there is anything that does not satisfy the style rules, then you should see it as a warning in the *Error List* window

This should be it! Good luck! Make sure before posting your assignment, you don't get any *StyleCop* warnings.
